

Email Archival from Aurea Messaging Solutions for secure, long-term storage

Email Archival from Aurea Messaging Solutions (AMS) is a cloud-based service that combines continuous archiving of all your email messages and attachments with fast, comprehensive search and discovery. Whether you rely on Office 365 or an on-premises Exchange environment, AMS Email Archival ensures that email is available and accessible when needed, without creating a storage or performance burden on your infrastructure.

Scalable retention meets rapid discovery

With AMS Email Archival, you can capture, retain, preserve, and search for all of your email. By capturing an instance of each email message, applying granular retention and disposition policies, and providing advanced search, AMS Email Archival provides the archival services you need.

And, since it's delivered as software-as-a-service (SaaS), the solution frees IT from managing additional systems and storage, while still providing the benefits you demand.

KEY BENEFITS INCLUDE:

SCALABLE, LONG-TERM RETENTION

Scalable, secure cloud storage: AMS Email Archival is built on Amazon Web Services (AWS), and takes full advantage of the capabilities that make AWS the most reliable, secure, and dominant cloud platform in the world. Archived email is also stored with customer specific encryption to ensure the highest security standards.

Flexible retention policies: Set as many retention policies as you need to meet compliance and business needs. Our flexible retention criteria ensure policies can be as granular as required. Legal hold capabilities let you identify messages that shouldn't be purged at all; and with our long-term retention capabilities, you can even continue to archive emails previously deleted from user accounts.

Attachment stubbing: AMS Email Archival can stub-out attachments based on age, size, file type, and more. Stubbing policies can also be associated with users, mailboxes, and groups. This can massively reduce local Exchange storage requirements by up to 80%.

- Formerly MessageOne, the industry leader in end-to-end email continuity, archival, security, and crisis communications
- Centralized email retention discovery Exchange and Office 365
- Designed to meet the demands of large and small enterprises

Import historical email: Securely upload pre-existing email via our import manager application, which can be easily installed and accessed with any internet connection. With our managed import service, AMS Email Archival also enables and simplifies large bulk imports.

DISCOVERY SUPPORT

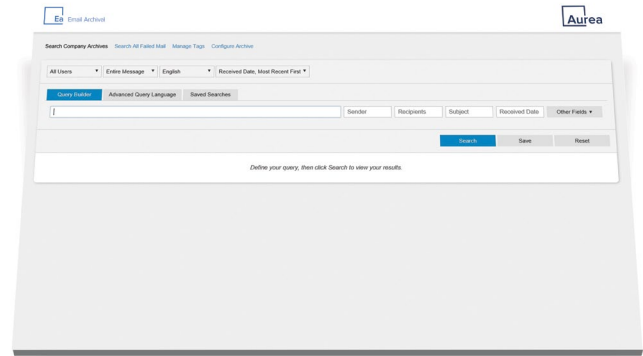

Fast, on-demand search: The entire email contents — including headers and attachments — are fully indexed for fast, comprehensive search by reviewers through our discovery web interface. Millions of emails can be searched in seconds. You can also delegate discovery rights to specific users without granting full administrative rights.

Flexible search criteria: Reviewers can perform complex searches across headers, subject lines, message body, attachment file names, and the contents of over 450 different file types. And, sophisticated search capabilities ensure you can respond to legal requests quickly and confidently.

Saved search results: Searches and associated results can be saved for future use, speeding and simplifying your discovery processes.

Confident, comprehensive archival within reach

You can't risk delays or loss when it comes to email archival. With Email Archival from Aurea Messaging Solutions – formerly MessageOne – you can rest assured that long-term, complete, and fast email access is at your fingertips.
