

Email Continuity from Aurea Messaging Solutions delivers always-on failover

When database corruption, viruses, or system maintenance and migration issues occur, employees often find themselves without email access. Traditional approaches to high availability and data recovery can provide incomplete protection at high prices.

With Email Continuity from Aurea Messaging Solutions (AMS), you can count on reliable, secure access to email, instantly. Whether the outage is planned or unplanned, AMS Email Continuity enables users to send and receive email through mobile devices, web browsers, or Microsoft Outlook — and, it can be activated in less than 60 seconds.

Delivered in the cloud, AMS Email Continuity provides continuous standby email, while freeing IT staff from managing additional complex systems.

- Formerly MessageOne, the industry leader in end-to-end email continuity, archival, security, and crisis communications
- Cloud-based standby email system for Exchange environments
- Full email access in less than 60 seconds

Continuous, standby email without the hassle

Millions of users across more than 1,000 companies depend on AMS Email Continuity every day to ensure consistent email delivery and recovery in Exchange environments.

With AMS Email Continuity, the process is simple. As email is sent and received, a copy of each file is compressed, encrypted, and transmitted to the AMS cloud for secure storage. When an outage strikes, Email Continuity can be activated in seconds, giving all users full access to recent and incoming email, contacts, and calendar entries.

KEY BENEFITS INCLUDE:

Fast failover, completely under your control: Users can continue to send and receive email, while IT staff focuses on restoring primary systems. With AMS Email Continuity, users have complete access to email, calendars, contacts and distribution lists, even during an outage.

Seamless mobile access: Automated failover ensures that users don't even realize the switch. During a primary system outage, employees using Apple and Android mobile devices can continue to send and receive messages without interruption.

Automatic reconciliation: Easily reconcile all activity completed during an outage after the event is resolved. Your Exchange server remains completely up-to-date with sent and received email, including timestamps and read/unread status.

Intuitive Outlook integration: Seamlessly switch users to the backup email system upon activation, making outages virtually invisible. And, seamless mobile access ensures access on every device.

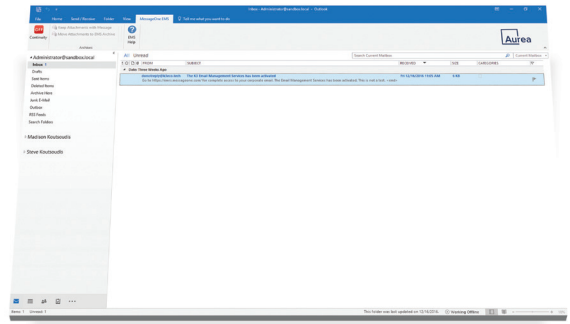

Total data-loss prevention: Ensure 100% data-loss prevention in your Exchange environment. Unlike high-availability solutions based on replication, clustering, vaulting and log shipping, AMS Email Continuity is not vulnerable to database corruption. If messages are ever lost or corrupted in the primary email system, you can easily locate the missing messages and restore them back to Exchange.

Right-sized and cost-effective: Manage costs by controlling the amount and duration of email history stored in user backups — so you can ensure high data continuity at the lowest-possible cost.

Enhanced security: AMS Email Continuity is built on Amazon Web Services (AWS), and takes full advantage of the capabilities that make AWS the most reliable, secure, and dominant cloud platform in the world. This allows Email Continuity users benefit from increased performance, scalability, built-in redundancy, and lightning fast disaster recovery.

Don't let offline email put business on the line

When email is offline — putting your business on the line — Email Continuity from Aurea Messaging Solutions ensures seamless email continuity and recovery at the pace of your business.
